HOMES
for a beautiful tomorrow

DECEMBER 2025 NEWSLETTER

Let's keep **#buildingsustainAbility**

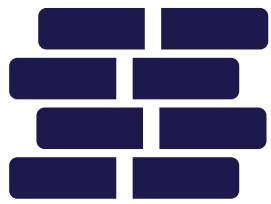

Dear Patrons,

As we step into December, the final month of the year brings with it a quiet sense of reflection and renewed purpose. It is a time to look back at the milestones achieved, the progress made, and the collective effort that has shaped our journey so far. With the year drawing to a close and a fresh beginning just around the corner, this month's newsletter comes to you with updates that highlight our continued commitment, growth, and momentum.

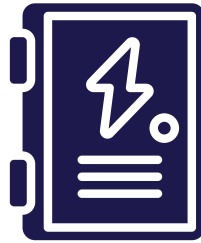

In this edition, we present the **latest construction progress updates**, offering you a detailed view of how your future spaces are steadily taking shape. You will also find an engaging **podcast** to reflect on, an overview of **the neighbourhood** that continues to evolve with promise, and our **Sustainability Matters** segment, featuring an inspiring video on sustainable living that encourages us all to move towards a greener tomorrow.

The Neighbourhood

Railway Over Bridge

The construction of the Railway Over Bridge near our project continues at a slow pace. Progress over the past month has been minimal, with only limited activity observed on-site. We remain hopeful that the executing authorities will expedite the work in the coming weeks

An aerial view of the Railway Over bridge.

Sustainability Matters

Eco India: What does the greening of the Thar mean for its desert ecosystems”

This edition brings you a compelling exploration of Thar Desert’s transformation —Eco India: What does the greening of the Thar mean for its desert ecosystems” — offering fresh perspectives on how restoration efforts are reshaping one of India’s most iconic arid landscapes. The video delves into the ecological, social and environmental impacts of recent greening initiatives. Through this lens, we gain insight into the potential for sustainable interventions even in the harshest terrains.

Key Points

- Large-scale greening initiatives in the Thar are increasing vegetation cover in previously barren areas.
- Improved plant growth is helping reduce soil erosion and stabilise shifting sand dunes.
- Native species restoration is supporting the gradual return of local wildlife.
- Greening efforts are creating microclimatic improvements, offering better living conditions for nearby communities.
- Experts caution that restoration must prioritise native species and sustainable water use to avoid ecological imbalance.

As individuals and communities, we can contribute by planting native species, conserving water, reducing waste, and supporting local ecological restoration initiatives.
